

Study of Mechanisms for Reducing Impacts of Implementing Economic Development Plan on Agriculture Sector via Agricultural Products Insurance System

A. R. Nikooie*

Abstract

Controlling negative impacts of Economic Development Plan, which is expected to be approved by the Islamic Consultative Assembly, on economic security of the agriculture sector is an essential task. Insuring agricultural products could serve as a positive mechanism for the realization of such a target. However, executive problems on the way of implementation of insurance have prevented realization of an efficient insurance system. Results of this study, which was conducted on basis of experiences gained through implementation of insurance of agricultural products in different countries and on the outcome of the performance of insurance systems in some regions, show that regulation of the executive plan for implementation of insurance of agricultural products is essential in some cases. Therefore, innovations have been offered in implementing insurance of agricultural products.
