Abstract

The present study was conducted to assess and analyze the quality of agricultural insurance educational system for sustaining the mentioned system from the viewpoint of the agricultural insurance managers throughout the country. This research is a descriptive – correlation research type. The statistical population of the research consisted of all managers who were employed in the agricultural insurance fund (N = 93) that interviewed using a questionnaire. Cronbach's alpha was used to assess the reliability of the study, (0.875), which indicates the reliability of the main scale of research. The data analysis was performed using SPSS software. The findings of the study shows that the fund should attract the practiced and professional individuals out of the fund as well as the members should be trained for active participation in the fund's education system. Corresponding to these findings, it is suggested that two programs of identification and recruitment of competent instructors out of the fund and empowerment the members should be taken into consideration.
